

Project Phase Procurement

Client: Coal Mining Projects

Location: Multiple Mining Leases in the Bowen Basin

Scope: Development of Tender Plan and Tender Management Services

The Client had initiated the exploration phase for various mining leases and required services under contract to complete the exploration work.

Stanmore Coal did not have an in-house procurement team, so Caliba was engaged to assist to develop the services contracts so the exploration work could commence.

Caliba was engaged to work with the technical services team to develop the scope of work and specifications for various exploration services requirements.

Tenders were released to pre-qualified Contractors, and managed by the Caliba team including exploration drilling, geophysical logging, and coal testing services.

The outcome of the new negotiated contracts resulted in Stanmore Coal's drilling campaign being completed on time and within budget, and providing the drilling information required.

Caliba also assisted Stanmore Coal with its budgeting for on-site infrastructure and mining equipment by providing market information including pricing and current lead times.
